

Analysis of Churn in Q3/Q4

Fit.ly Tech – Team Data Analytics

Regina Rehmann, 18.09.26

Business Problem

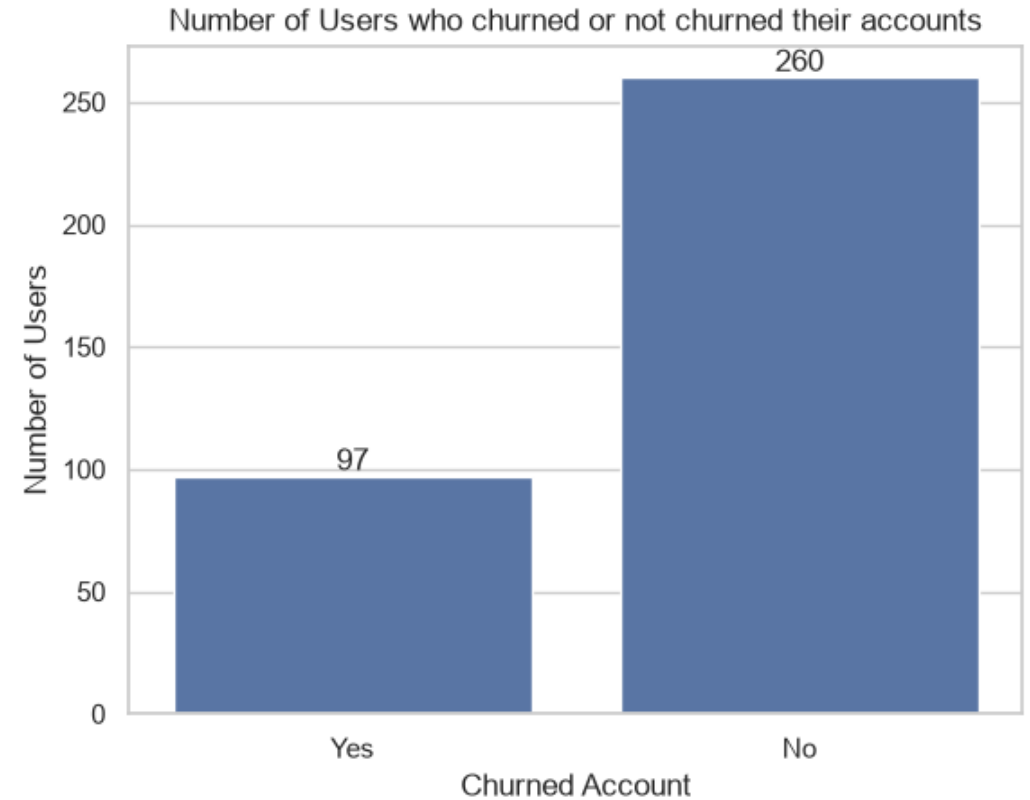

- Increasing churns of user accounts seen in the last 6 months
- Increasing costs of acquiring new users

Goal: finding ways to stop the increase of churns to generate stable revenues!

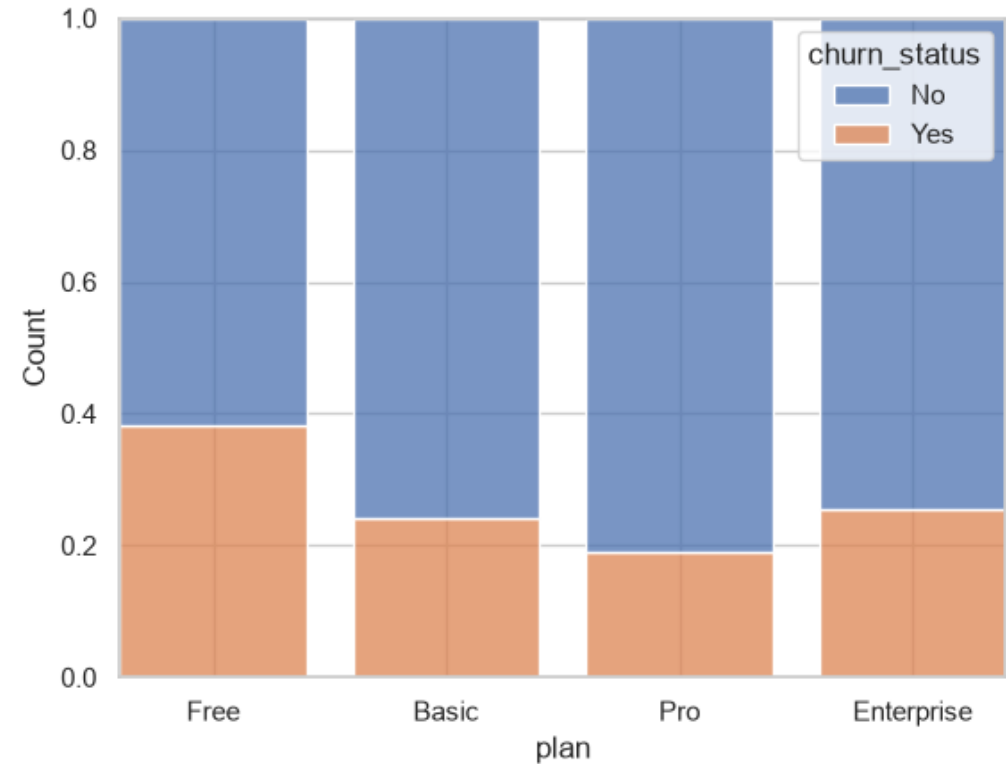

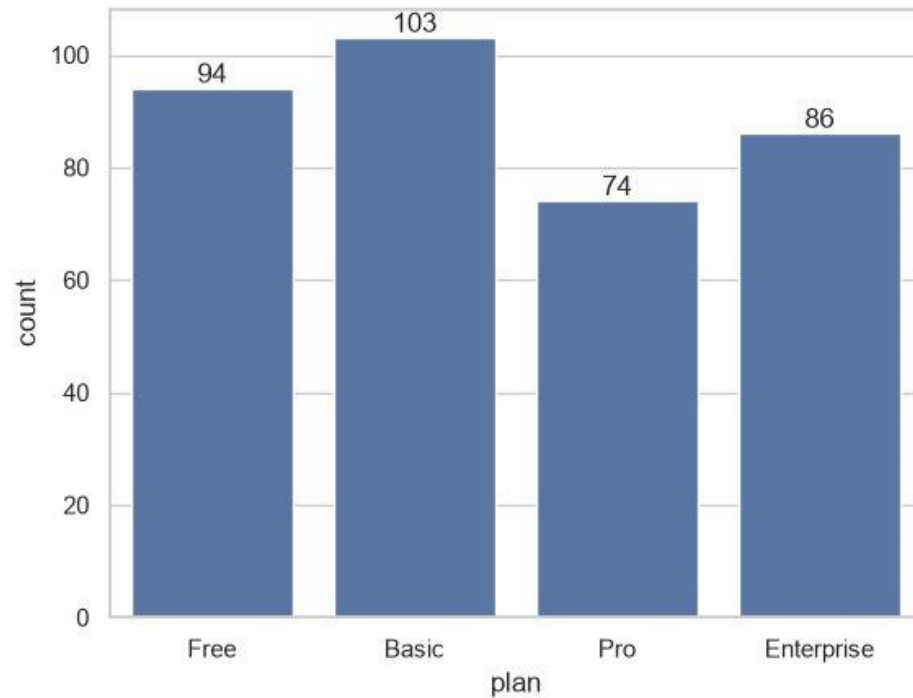

User statistics

Analyzed data:

- Data from 05.06. to 01.12. (6 month period)
- General account information, customer support tickets, user activity information
- 400 total users, 357 after GDPR cleaning

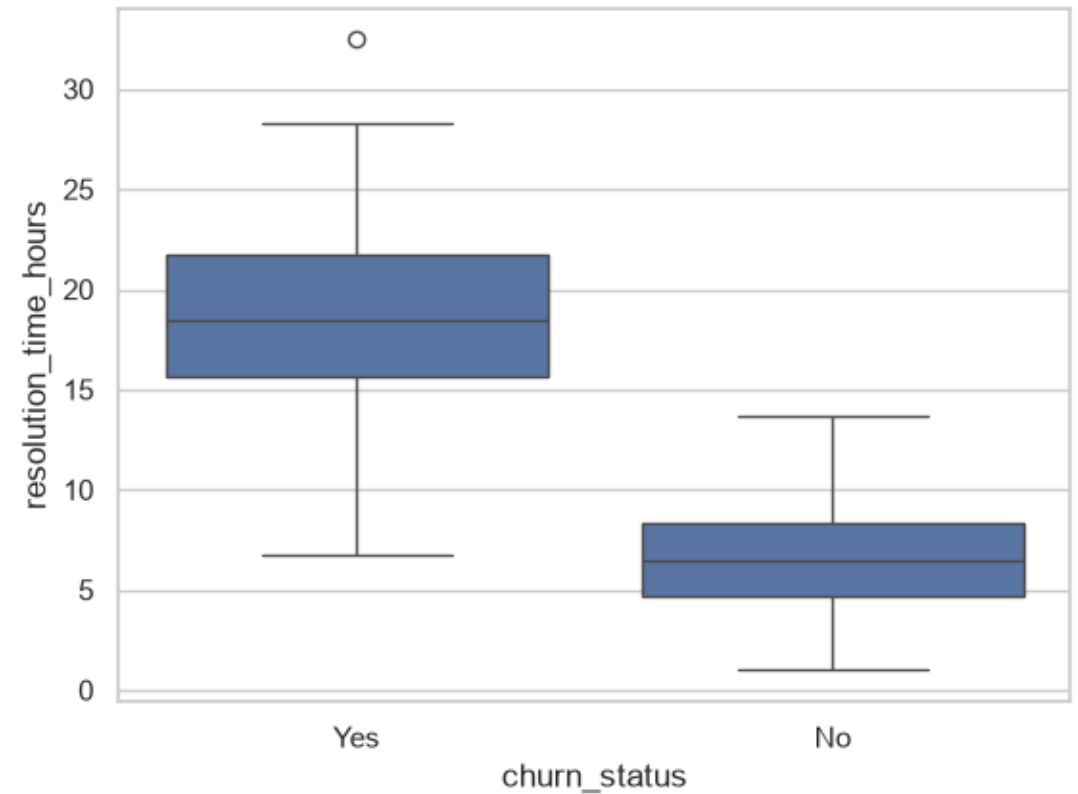

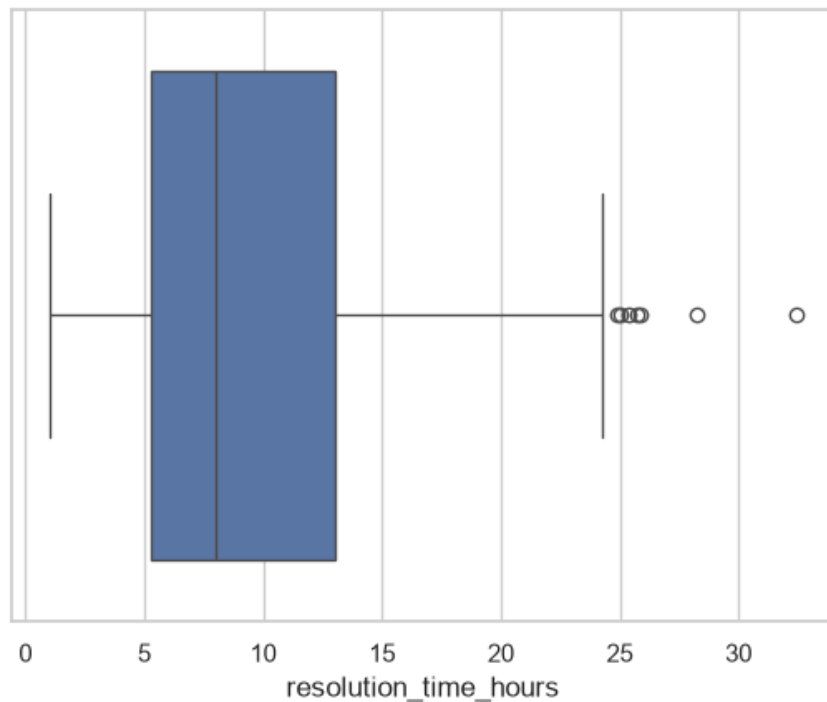

Churn and plans

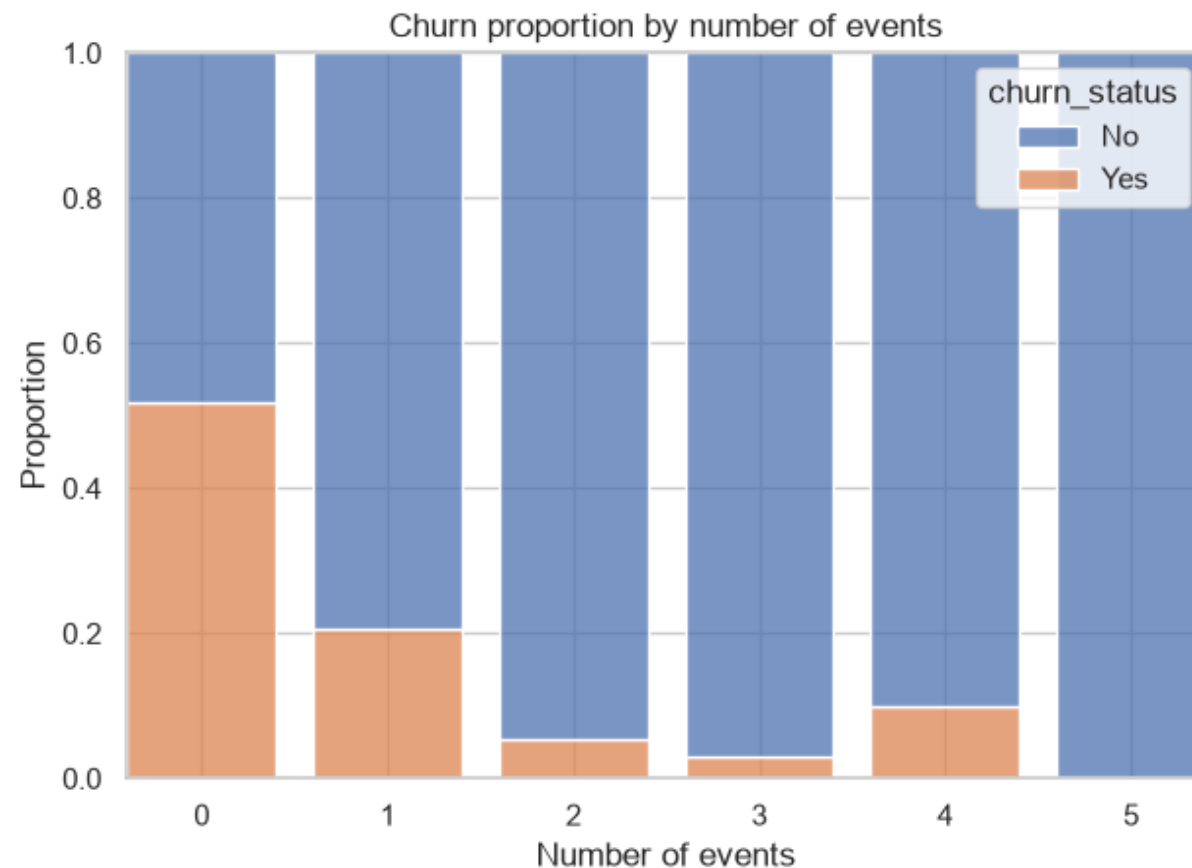

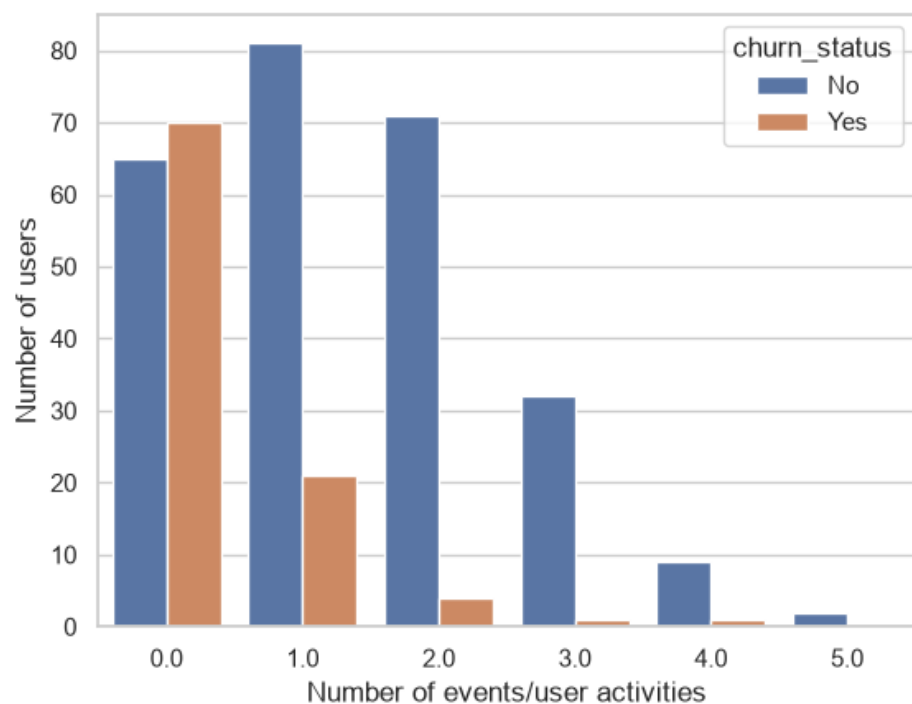

Higher churn on free plan!

Churn and tickets

Higher churn on higher resolution time of tickets!

Churn and activity

Higher churn on less user activities!

Churn metric to monitor

- Suggested metric:

Churn Rate (number of churned accounts/number of total accounts)

or: Churn Rate of users with paid plans

	Initial Value	Suggest Target Value 1	Suggested Target Value 2
Churn Rate	27.2%	4.0%	12%
Period	6 month	1 month	1 quarter

- Suggested monitoring period: monthly or quartly

Recommendations

- Monitor churn rate and churn rate for paid plans every month or quarter
- Include "Account start date" and "Account end/churn date" in the dataset
- Further:
 - Review process of customer support
 - Engage subscribed users to do more activities on the platform

Thank you for your attention!
